Why MVC is so important
Posted by Xandromus on 5/8/2020

MVC allows developers to maintain a true separation of concerns, devising their code between the Model layer for data, the View layer for design , and the Controller layer for application logic.

Why MVC is so important   Posted by Xandromus on 5/8/2020

MVC allows developers to maintain a true separation of concerns, devising their code between the Model layer for data, the View layer for design , and the Controller layer for application logic.

Authentication vs. Authorization   Posted by Xandromus on 5/8/2020

There is a difference between authentication and authorization. Authentication means confirming your own identity, whereas authorization means being allowed access to the system.
